

# Protect your lone workers with ease

Improve the safety of lone workers with comprehensive, flexible safety, helping your business meet health and safety standards, and providing peace of mind for your staff.

## Securitas Lone Worker Protection

For businesses, there can be many scenarios where employees are working in isolation. From long-haul truck drivers to single-staffed stores and warehouse staff, protecting your employees when there is no-one else around is vital.

Providing a safe working environment for your people and meeting legal and compliance standards are necessary to keep your business running smoothly.

Securitas Lone Worker Protection is a safety solution that meets your business needs, helping you protect your people 24/7.

The heart of our protection is the remote connection from your employees to our experts at the Securitas Operations Center (SOC).

We provide Lone Worker Protection to your employees through either a device – a [Personal Protection Alarm \(PPA\)](#) - or through a [smartphone application](#).

A [PPA \(Personal Protection Alarm\)](#) is a [portable or wearable device](#) designed specifically for lone workers.

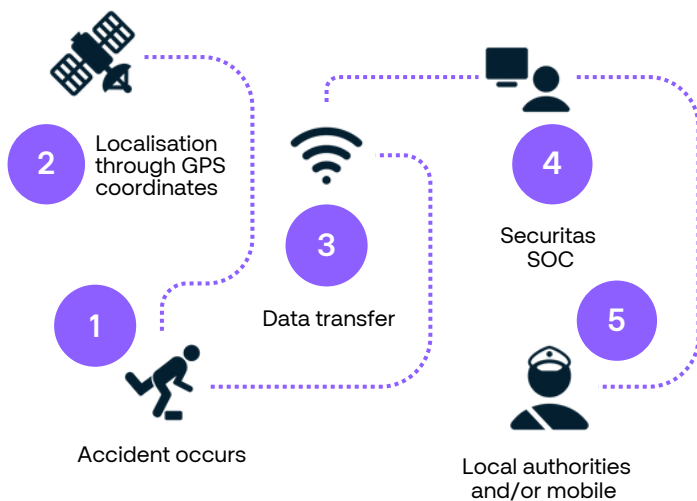

- It includes a high-tech global positioning system (GPS) to locate the user in case of an alarm.
- Ideal for staff who need a dedicated, robust device for safety, independent of their smartphones.

[Lone Worker Application](#) is our [smartphone app](#) available on both iOS and Android systems.

- It provides the same Lone Worker Protection features as the PPA, utilizing the smartphone's capabilities.
- Suitable for employees who prefer using their personal or work smartphones for safety.

## KEY FEATURES

- Access to Lone Worker Protection via a Personal Protection Alarm (PPA) or our smartphone app.
- Remote connection to our Securitas Operations Center (SOC) – 24/7 support available.
- Enhance lone worker safety with indoor positioning, which uses Wi-Fi access points and beacons, to quickly pinpoint the exact location during emergencies.
- Securitas mobile dispatch readiness included to provide additional support, when needed.
- High tech global positioning system (GPS) provides our SOC accurate and fast access to your employee positioning in emergency situations.
- Man-down detection – alerts can be triggered when the device detects a loss of verticality.
- Panic buttons - can be used by your staff to alert the SOC and receive fast support.
- Key-holding – possibility to add key-holding services, for example, to enable access to your sites if your lone worker is not able to.
